SOCI: 361

POPULATION & Environment

with Dr. Berna Torr

Want to learn more about the relationship between population and environment?

We'll explore fertility, health & mortality, and immigration and how these population processes affect the economy, education, other social concerns as well as the environment. We'll explore effects on water, transportation, trash, energy, and even our food and air quality and discuss the effects of various demographic and social policies.

We'll explore our local communities with field trips and data and learn the basics of story-mapping with ArcGIS online. Meets GE category D3.
